1 Definitions

- **The standard deviation:** The standard deviation quantifies the variation within a set of measurements. Must not be confused with the standard error. The standard deviation is the most used.

$$s = \sqrt{\frac{\sum_{i=1}^n (x - \bar{x})^2}{n - 1}}$$

- **The standard error:** The standard error quantifies the variation (standard deviation) of an estimated parameter (or statistic) from a sampling distribution. This is the distribution of the means. Can be estimated with a single set of measurements.

$$\text{Standard Error} = SE = \frac{s}{\sqrt{n}}$$

- **The coefficient of variation:** The coefficient of variation, also known as relative standard deviation, is a standardized measure of dispersion of a probability distribution. The coefficient of variation in absolute value :

$$CV = \frac{\sigma}{\bar{x}}$$

- **The coefficient of variation in percentage :**

$$CV_{\%} = \frac{\sigma}{\bar{x}} * 100$$
